

MEIC - Software Engineering – 2014/15
5th Practical class - UML modelling project - Part 2: Domain modelling

Add a logical view (or class view) to your modelling project started in the previous class, and create a domain model, including OCL constraints and object lifecycles, as described and exemplified in the theoretical class number 10.

The lifecycle of a prescription should start with the act of prescribing and finish with the payment to the pharmacy of the expenses that are supported by the National Health System.
